APPIANI CERAMIC MOSAIC: CLEANING AND MAINTENANCE INSTRUCTIONS

Cleaning after fixing

The cleaning of the grouted mosaic has to be done within 2 days after the fixing operations, by using clean sponges, in order to remove eventual grout stains remained.

Wash the surfaces with water and/or with very low acid-based product, having care of re-wash them right after with pure water.

If necessary, use a specific product, suitable for the cleaning of ceramic mosaic.

Even for this operation, proceed with diagonal movements in respect to the joints.

DO NOT USE any abrasive material like scourers and other equipments that may cause mechanical removal.

Maintenance

Once finished the fixing operations, grouting and first cleaning, it is recommended to use ordinary products, available on the market, specific for the cleaning and maintenance of the ceramic surfaces.

In case of need for extraordinary cleaning, it is recommended to use specific products, not forgetting to mix them with water at 50%.

As an alternative, it is recommended to use products containing at the most 26% of acid component.

Always taking care of complete the cleaning using just pure water, in order to avoid that possible residuals of the cleaning agents may remain on the glazed surface.

Pay particular attention, especially in the presence of glossy and/or golden mosaic, in order to prevent any possible damage, with consequent alteration of the visual and tactile aspect.

Even for the routine maintenance operations DO NOT USE any abrasive material and equipment that may cause mechanical removal.
